COVERiT™

FOR
dotworkz
systems

COVERiT™ solutions for dotworkz systems enable you to position surveillance cameras into their natural environments while preserving the architectural integrity of your building facade.

This innovative process uses durable, fade-resistant high performance vinyl to "cover" the camera enclosure. Each pattern is digitally enhanced - camouflage, concrete, stucco, brick - completely customized to match the background setting of the environment. The material is then professionally installed on to the dotworkz enclosure to ensure it withstands the most extreme of outdoor conditions.

The end result is a camera enclosure that blends into the background, and virtually becomes unnoticeable. Whether the cameras are mounted directly on to building surfaces, poles or into natural settings, the results are spectacular **COVERiT™**.

THE PROCESS

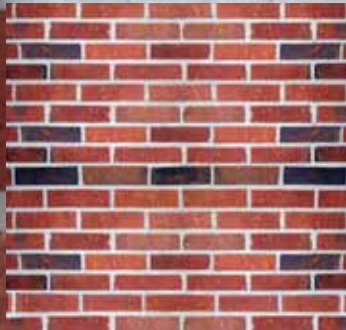

SITE SURVEY

Evaluation of camera placement and mounting hardware

FACADE MATCHING

Modification of digital imagery with actual or database generated photography

VINYL INSTALLATION

Printing, cutting and adhesion of vinyl

ENCLOSURE INSTALLATION

Mounting of enclosure into the **COVERiT™** position
